DIE HOMÖOPATHISCHE ARZNEIPOTENZIERUNG

Samuel Hahnemann hat die Homöopathie entdeckt und die homöopathische Arzneipotenzierung entwickelt. Seine Herstellvorschriften wurden zur weltweiten Grundlage für die homöopathische Arzneipotenzierung. Als bester Weg erschien es uns daher, die anerkannten Errungenschaften der Arzneiherstellung Hahnemanns genauestens zu studieren und diese mit den modernsten pharmazeutischen Erkenntnissen zu kombinieren, um optimale homöopathische Arzneimittel herzustellen.

Wir verwenden dazu natürliche Arzneimittel und beziehen unsere Rohstoffe von biologischen Standorten, woraus wir Verreibungen selbst herstellen. Arzneiherstellung und analytische Qualitätskontrolle erfolgen gemäß Österreichischen Arzneimitteigesetz 1983, Arzneibuchverordnungen und nach den Vorschriften des Homöopathischen Arzneibuches HAB 2014, um durch standardisierte Herstellungsbedingungen zuverlässige Therapieergebnisse zu gewährleisten.

LIEFERBARE POTENZSTUFEN

Wir potenzieren die D-, C-, LM- und Q-Potenzen ausschließlich händisch in der Mehrglasmethode sowie K- und FC-Potenzen nach der Einglasmethode durch spezielle maschinelle Potenzierungsverfahren.

D-Potenzen

Die Potenzierung erfolgt durch händische Verschüttelung im Verhältnis 1:10 durch 10 kräftige Schüttelschläge auf einen elastischen Körper oder durch Verreibung auf Laktose. Für die Anfertigung von Globuli verwenden wir Saccharose Streukügelchen der Größe 3 des HAB, das entspricht ca. 120 Stück pro Gramm.

C-Potenzen

Die Potenzierung erfolgt durch händische Verschüttelung im Verhältnis 1:100 durch 10 kräftige Schüttelschläge auf einen elastischen Körper oder durch Verreibung auf Laktose. Für die Anfertigung von Globuli verwenden wir Saccharose Streukügelchen der Größe 3 des HAB, das entspricht ca. 120 Stück pro Gramm.

LM-Potenzen

Die Potenzierung erfolgt aus der C3-Trituration nach Vorschrift 6 oder 17 des HAB 2014 durch händische Verschüttelung mit exakt 100 Schüttelschlägen gegen eine harte und elastische Unterlage, wonach Globuli der Größe 1 im Verhältnis 1:50.000 benetzt werden.

Q-Potenzen

Die Arzneiaufarbeitung der Q-Potenzen erfolgt gemäß Herstellervorschrift 59 durch sorgfältige C3-Handverreibung von Mineralien, tierischen Giften oder Frischpflanzen und Potenzierung im Verhältnis 1:50.000. Samuel Hahnemann hat diese Vorgangsweise für fast alle Rohstoffe empfohlen, da die vollkommene Erhaltung der Inhaltsstoffe zu besonders kraftvollen Wirkungen führt.

K-Potenzen

Korsakoff-Potenzen werden bis zur 100MK durch maschinelle Verschüttelung mit 10 kräftigen Schüttelschlägen potenziert. Die Remedia-Methode startet dabei mit einer händisch angefertigten C200 aus der Mehrglasvariante.

FC-Potenzen

Fluxionspotenzen werden seit 100 Jahren nach dem kontinuierlichen Verdünnungsprinzip angefertigt, ihre zuverlässige und kräftige Wirkung wurde auch von Kent gelobt. Die in unserem Labor hergestellten Arzneien werden nach der Fincke'schen Methode bis zur FC100M maschinell potenziert.

Die tiefst- und höchst-lieferbaren Potenzen für Dilutionen, Globuli, D-, C-, K, LM-, Q- und FC-Potenzen sind aus den Tabellen ersichtlich.
